

Appendix 2

Do you want me to be specific? I am able to perform a Bayesian analysis, to test for coevolution, to analyse linear and geometric morphometrics, to quantify behavioural interactions and testing the with non-parametric statistics and resampling, to use MAN(C)ONVA for testing for differences in preferred temperatures and water loss rates, to build MaxEnt models, to use null Monte Carlo models for analyzing ecological overlap and community structure, to use Vortex to predict demographic parameters, TRIM a Poisson statistics to monitor multi-species trends, Ramas Red List to attribute conservation categories. And of course, I can design studies in all these disciplines and main and the build integrative analyses joining all them. Should I say more? Then, this should have been indicated in the rules of the call. Now this is not acceptable
